Subject: Application for the position of Senior Software Engineer

Dear Ms. Kavita Rao,

I am writing to apply for the Senior Software Engineer role at Kestrel Software, advertised on your careers page. I have spent the last five years building and running backend services in Java and Python, and your team's work on payments infrastructure is exactly the kind of problem I want to solve next.

In my current role at a logistics platform I own three production services that handle several million requests a day. I design APIs, write and review code, and lead our on-call rotation. Last year I moved our order service to an event-driven design, which made deployments safer and cut failed orders sharply. I also mentor two junior developers and run our weekly code review session.

Your job description asks for someone who cares about reliability and clean code. I introduced contract tests and better monitoring in my team, and our production incidents dropped noticeably within two quarters. I would bring the same habits to Kestrel, along with a willingness to pick up whatever the team needs most.

Thank you for considering my application. I have attached my resume and would welcome the chance to discuss the role with you.

Yours sincerely,

Rohan Mehta
